Mapping Our Magnificent World with Finn the Dolphin

Dive into discovery and chart your course across our amazing planet!

- **There are seven continents on Earth: Africa, Antarctica, Asia, Europe, North America, Oceania, and South America. Each one has unique landscapes and climates.**
- **The five major oceans are the Arctic, Atlantic, Indian, Pacific, and Southern. The Pacific Ocean is the largest and deepest of them all.**
- **Continents are massive landmasses separated by vast stretches of water. Asia is the largest continent by both land area and population.**
- **The Equator is an imaginary line that divides the Earth into the Northern and Southern Hemispheres, influencing the weather patterns on different continents.**
- **Finn the Dolphin reminds us that the Southern Ocean is the newest ocean to be officially recognised by geographers, surrounding the continent of Antarctica.**

> *Did you know? Did you know? Even though we call them separate oceans, they are all connected! Together, they form one 'Global Ocean' that covers over 70% of our planet's surface, acting as the life-support system for all living things.*

Key vocabulary: Continent · Ocean · Hemisphere · Equator · Latitude · Longitude · Tectonic plate
