Capturing Industrial Life: The Art of L.S. Lowry

1. The figures are thin, simplified, and lack detailed features, often called 'matchstick men'. They appear to be moving with purpose or hurrying. He likely painted them this way to show the anonymity of the working class and the busy, repetitive nature of industrial life. (3 marks)

Working: Evidence: 'matchstick men' style; industrial context.

1 mark for description of appearance, 1 mark for movement, 1 mark for a reasoned explanation.

2. The five colours are white, black, red, yellow, and blue. This limited palette creates a bleak, gritty, and somber mood, reflecting the harsh reality of industrial towns. (2 marks)

Look for: Identification of the five specific colours and a link to the somber/industrial mood.

Good: He used white, black, red, yellow, and blue. It makes the paintings look sad.

Better: Lowry used white, black, red, yellow, and blue. These colours make the paintings feel gloomy and industrial.

Best: He used a limited palette of white, black, red, yellow, and blue. This creates a stark, muted atmosphere that reflects the grey, soot-covered reality of the industrial north.

What moves an answer up: The best answer links the specific palette to the historical context of the industrial environment.

3. Lowry uses linear perspective by making the buildings in the distance smaller and higher up on the canvas compared to the larger, more detailed figures in the foreground. (2 marks)

Look for: Mention of size reduction and placement on the canvas (foreground vs background).

Good: He makes the buildings smaller so they look further away.

Better: He draws the buildings smaller and higher up on the page to show they are far away from the people in the front.

Best: Lowry uses perspective by shrinking the scale of the buildings in the distance, while keeping the foreground figures larger and more detailed to create a sense of depth.

What moves an answer up: The best answer uses technical art vocabulary like 'scale' and 'depth'.

4. The smoke and smog create a heavy, oppressive atmosphere. Historically, this represents the pollution from coal-burning factories that dominated the skyline of northern towns during the Industrial Revolution. (2 marks)

Look for: Connection between smoke/smog and industrial pollution/atmosphere.

Good: The smoke makes the sky look dirty and shows it is a factory town.

Better: The smoke adds to the atmosphere by showing how polluted the air was in industrial towns during the 19th and 20th centuries.

Best: The inclusion of thick smoke creates a gloomy, oppressive atmosphere, reflecting the reality of the Industrial Revolution where coal-burning factories constantly polluted the air.

What moves an answer up: The best answer connects the artistic choice to the historical reality of the era.

5. Answers will vary. Example: 1. A modern supermarket (to show current shopping habits). 2. A block of flats (to replace terraced houses). 3. A wind turbine (to show modern energy). Reasons: These show how our town has changed from the industrial past while keeping the 'busy' feel of Lowry's work. (3 marks)

Look for: Three distinct modern features and a logical reason for their inclusion.

Good: I would paint a shop, a car, and a phone mast because they are in my town.

Better: I would include a modern block of flats, a busy road with cars, and a wind turbine to show how our town has changed since Lowry's time.

Best: I would paint a modern supermarket, a block of flats, and a wind turbine. These features represent modern life, but I would use Lowry's muted palette and 'matchstick' figures to maintain his unique style.

What moves an answer up: The best answer balances modern subjects with the specific artistic techniques requested.

What a secure answer looks like

A secure answer demonstrates an understanding that Lowry's style was a deliberate choice to capture

the social and environmental reality of the Industrial Revolution.

If your child is stuck

Ask the child to imagine they are standing in a black-and-white photograph of a busy street; what would they see, and how would the air feel?

Common mistakes to watch for

Students often think Lowry painted 'badly' because the figures are simple, rather than understanding it was a deliberate artistic choice to show mass movement.
