Finn’s Biome Discovery Flashcards

Learning objective: To identify and describe different biomes across the world and understand the climate and wildlife found within them.

Use these flashcards to test your knowledge about the world's biomes. Finn the dolphin has been mapping these regions, so read carefully to see if you can match the biome to its description!

What is a biome?

A large area of the Earth that has a specific climate, plants, and animals that have adapted to live there.

Describe the climate of a Tropical Rainforest.

It is very hot and humid all year round, with a lot of rainfall.

Which biome is known for being extremely dry and getting very little rainfall?

A Desert.

What is the Tundra biome like?

It is very cold, has a short summer, and the ground is often frozen, meaning few trees can grow.

What kind of plants are mostly found in a Grassland biome?

Mostly grasses, flowers, and very few trees.

What is the imaginary line around the middle of the Earth called, where many rainforests are located?

The Equator.

Why do animals in the desert often come out at night?

To avoid the extreme heat of the sun during the day.

True or False: All biomes have the same weather and animals.

False. Biomes vary greatly depending on their location, rainfall, and temperature.

What does the word 'climate' mean?

The usual weather conditions in a place over a long period of time.

Which biome is sometimes called a 'savanna'?

A tropical grassland.

Why are rainforests important for the planet?

They provide oxygen and are home to a huge variety of the world's plants and animals.

Finn is swimming near the coast; is the ocean considered a biome?

Yes, the ocean is a marine biome.
