Exploring the Polar Regions

Join Finn the Dolphin on a frosty adventure to the top and bottom of the world!

- **The Arctic is the region surrounding the North Pole, while the Antarctic is the region surrounding the South Pole.**
- **Polar regions experience extreme cold and have very long periods of daylight in summer and darkness in winter.**
- **Polar bears live in the Arctic (North), whereas penguins live in the Antarctic (South). They never meet in the wild!**
- **Glaciers are huge rivers of ice that move slowly across the land, carving out valleys as they go.**
- **Tundra is a vast, treeless plain where the subsoil is permanently frozen, known as permafrost.**
- **Climate change is causing polar ice to melt, which raises sea levels and affects the animals that live there.**

> *Did you know? Did you know? The North Pole is located in the middle of the Arctic Ocean, but the South Pole is situated on a massive continent called Antarctica, which is covered in a thick layer of ice!*

Key vocabulary: Arctic · Antarctic · Glacier · Permafrost · Tundra · Ice Cap · Axis
