

Nova's Amazing Animal Anatomy Flashcards

Learning objective: To identify and understand the functions of the digestive system in humans and the different types of teeth in animals.

Read the front of the card to test your knowledge. Flip it over (or read the answer provided) to see if you are correct! These cards will help you master the Year 4 topic: Animals Including Humans.

What is the process of breaking down food into nutrients called?	Which teeth are sharp and pointed, used by carnivores for tearing food?
Digestion	Canines
What is the long tube that carries food from the mouth to the stomach?	Which type of animal eats only plants?
The oesophagus	A herbivore
What are the flat, broad teeth at the back of the mouth used for grinding food?	What is the name for an animal that eats both plants and meat?
Molars	An omnivore
Which teeth are shaped like little chisels and are used for biting and cutting?	Where does most of the absorption of nutrients take place in the human body?
Incisors	The small intestine
What does a carnivore eat?	Which organ churns food and mixes it with acid to help break it down?
Only meat	The stomach
Why do humans have different types of teeth?	True or False: The large intestine is where water is absorbed from the undigested food.
To bite, tear, and grind different types of food	True
