

Masterpieces and Masters: A Journey Through Art History

Step into Zara's Gallery: Let your imagination paint the world!

- **Portrait artists focus on capturing the personality and features of a person, often using light and shadow to bring the face to life.**
- **Landscape artists paint the world around them, focusing on the beauty of nature, the horizon, and the way weather changes a scene.**
- **Impressionist artists used short, quick brushstrokes and bright colours to capture the feeling of a moment rather than every tiny detail.**
- **Perspective is a clever technique artists use to make a flat piece of paper look like it has depth, making objects look closer or further away.**
- **Sculptors create three-dimensional art by carving stone, moulding clay, or joining materials together, allowing us to walk around their work.**

Did you know? Did you know that many famous artists didn't just use paintbrushes? Some used feathers, sponges, or even their fingers to create unique textures on their canvases! Art is about experimenting to see what happens when you try something new.
