

Fraction Fun with Max

Learning objective: To understand and represent fractions using shapes and numbers.

Help Max the monkey solve his math puzzle by drawing and labeling fractions. Max loves to turn everything into a math problem, and today he's going to share a pizza with his friends!

Draw: Draw a large circle to represent a pizza. Use straight lines to divide the pizza into equal parts. Color the parts to show the fractions. Max is standing next to the pizza, looking happy. Draw Max and label him with his name.

Label words: pizza · half · quarter · eighth

Steps:

1. Step 1: Draw a pizza. Now, cut the pizza into halves. Label each half. How many halves are there?
2. Step 2: Cut one of the halves into quarters. Label each quarter. How many quarters are there in a whole pizza?
3. Step 3: Cut one of the quarters into eighths. Label each eighth. How many eighths are there in a whole pizza?
