

Finn's Big Biome Adventure

Learning objective: To identify and explore different types of natural environments (biomes) around the world.

Look at the different parts of the world in the picture. Use your favourite colours to bring the icy, sandy, and green places to life. Can you spot Finn the dolphin swimming in the blue sea?

Colour this: A large circular scene divided into three distinct sections. On the left, a snowy Arctic landscape with a tall iceberg and a small igloo. In the middle, a sunny desert with rolling sand dunes, a bright sun, and a cactus. On the right, a lush rainforest with tall, leafy trees and large tropical flowers. In the foreground, spanning the bottom, is a wavy blue ocean with Finn the dolphin jumping out of the water with a friendly smile. The lines should be bold and simple for easy colouring by 3-5 year olds.

Steps:

1. Label the icy place in your picture.
2. Label the sandy desert in your picture.

3. Label the green rainforest in your picture.
