

Finn's Amazing World: Our Big Biomes

Pack your bags with Finn the Dolphin! Let's explore the wonderful homes of our planet.

- A desert is a very dry biome where it does not rain very often.
- Forests are biomes filled with many tall trees and lots of green leaves.
- The ocean is a giant, salty water biome where Finn the Dolphin loves to swim.
- Polar regions are very cold biomes covered in lots of white snow and ice.
- The climate tells us if a biome is usually hot, cold, wet, or dry.

Did you know? Did you know? Even though our world is huge, every single animal and plant has a special home called a biome that gives them exactly what they need to stay healthy and happy!
