

Finn's Fantastic Map Adventure

Grab your compass and follow Finn the Dolphin to discover the world!

- A map is a bird's-eye view, which means it shows us what a place looks like from high up in the sky.
- Symbols on a map are little pictures that stand for real things, like a tree, a house, or a shop.
- A compass helps us know which way is North, South, East, or West.
- We use maps to find our way from one special place to another without getting lost.
- You can draw a map of your own classroom or your journey from home to school.

Did you know? Did you know? A long time ago, explorers used the stars in the sky to help them find their way across the deep blue sea before they had paper maps!
