

Zara's Easter Art Studio: Celebrating Spring

Unleash your creativity and bring the colours of spring to life!

- How can you use radial symmetry to create a balanced design on an egg shape?
- Why do artists often choose pastel colours like pale yellow, mint green, and lavender to represent spring?
- What techniques can you use to create physical texture on your artwork, such as layering card or using relief patterns?
- How can warm and cool colours be contrasted to make your central subject stand out from the background?
- In what ways can you incorporate organic shapes, like leaves and petals, to make your design feel more natural?

Did you know? Did you know? In many cultures, the egg is considered a universal symbol of new life and the arrival of spring. Artists often use intricate patterns and bright colours to represent the energy and growth found in the natural world during this season.

Key vocabulary: Symmetry · Complementary colours · Pattern · Texture · Symbolism · Pastel palette
