

Finn's Polar Adventure: Exploring the Ice

Bundle up, explorers! Let's travel to the coldest places on our map with Finn the Dolphin!

- The Arctic is found at the very top of our world where it is always very cold.
- Antarctica is a huge, snowy place at the very bottom of our world.
- Huge floating chunks of ice in the ocean are called icebergs.
- Animals like polar bears and seals have thick fur or blubber to keep them warm.
- The sun shines differently at the poles, making the ice stay frozen all year long.

Did you know? Did you know? The North Pole is in the middle of a frozen sea, but the South Pole is on a giant piece of land covered in very thick ice!

Key vocabulary: Arctic · Antarctic · Iceberg · Glacier · Freezing · Snow
