

Finn's Amazing Volcano Adventure!

Put on your explorer hat and dive into the world of mountains that rumble!

- A volcano is a special kind of mountain that can open at the top.
- Deep inside the Earth, it is very hot and the rock melts into liquid called magma.
- When the magma pushes its way out of the top, we call it an eruption.
- Once the hot liquid is outside the volcano, it is called lava.
- When the lava cools down, it turns back into hard, grey rock.
- Volcanoes are part of our world's amazing geography and can change how the land looks.

Did you know? Did you know? Some volcanoes are found deep under the ocean! Finn the dolphin has seen these underwater mountains puffing out bubbles and warm water.

Key vocabulary: Volcano · Magma · Lava · Mountain · Ash · Eruption
