

Max the Monkey's Shape-Finding Adventure!

Look around the room! Can you spot these shapes hiding in plain sight?

- A circle is round like a ball and has zero corners.
- A square has four sides that are all the same length.
- A triangle has three straight sides and three corners.
- A rectangle has four sides, but two are long and two are short.
- We can find shapes everywhere, from the clock on the wall to the pages in a book!

Did you know? Did you know? A circle is a very special shape because it has no corners at all—it can roll and roll forever without ever stopping!

Key vocabulary: Circle · Square · Triangle · Rectangle · Sides · Corners
