

Max's Place Value Party

Learning objective: To understand place value in 2-digit numbers by identifying tens and ones.

Help Max the monkey organise his party snacks! Colour the groups of ten bananas in yellow and the individual bananas in orange. Then, count them up to find the total.

Colour this: A friendly monkey named Max standing next to a table. On the table, draw two large bunches of bananas, with each bunch containing exactly ten bananas tied together with a ribbon. Next to the bunches, draw four loose individual bananas. Max is holding a clipboard and smiling. The background is a simple, clean park setting with a tree and a few flowers to colour.

Steps:

1. Label the group of ten bananas with the letter 'T' for Tens.
2. Label the single bananas with the letter 'O' for Ones.
