

Kit's Guide to Data Handling

Be a Data Detective with Kit the Fox!

- Data is information that we collect, like counting how many red cars pass our school gate.
- A tally chart is a quick way to record numbers by using lines to count in groups of five.
- Sorting helps us put information into groups so it is easier to read and understand.
- A bar chart uses colourful bars of different heights to show us which group has the most or least.
- Digital tools like spreadsheets help us create charts quickly and make fewer mistakes.

Did you know? Did you know? Computers are amazing at handling data because they can sort thousands of items in the blink of an eye! Before computers, people used paper lists, but now we can use software to turn numbers into colourful pictures.
