

Kit's Guide to Computer Networks

Join Kit the Fox on a digital adventure! Discover how computers talk to each other.

- A network is a group of two or more computers joined together to share information.
- Computers can connect using wires, like cables, or without wires, using Wi-Fi.
- A 'server' is a powerful computer that stores files for everyone on the network to use.
- Networks help us print documents from a printer in another room.
- When computers are linked, they can send data, like pictures and words, to each other very quickly.

Did you know? Did you know? The biggest network in the world is the Internet! It connects millions of computers all across the globe so we can send messages and learn new things in an instant.

Key vocabulary: Network · Connect · Share · Server · Data · Internet
