

Kit's Computing: Connecting Computers

Learning objective: To understand that a network is a group of computers connected together to share information.

Help Kit the fox learn about networks. Read each question carefully. Use the word bank to help you complete your sentences.

Word bank: network · share · cables · internet · connected

1. Kit wants to join three computers together so they can talk to each other. What do we call this group of computers? (2 marks)

2. When computers are in a network, they can swap files or pictures. What is the word for giving information to another computer? (2 marks)

3. Computers are often linked by wires. Can you name the other word for these wires? (2 marks)

4. Finish this sentence: A large network that connects computers all over the world is called the _____. (2 marks)

Draw: Draw three computers. Use lines to join them together to show they are part of a network.

Extension challenge: Imagine you have two tablets in your house. Write one reason why it would be useful to have them connected to the same network.
