

Finn's Amazing Rainforest Adventure!

Dive into the jungle with Finn the Dolphin! Discover the secrets of the world's most colourful habitats.

- Rainforests are found near the Equator, where it is warm and rainy all year round.
- The Emergent Layer is the very top of the rainforest where the tallest trees touch the sky.
- The Canopy is a thick layer of leaves and branches that acts like a giant umbrella for the forest.
- The Understory is a dark and quiet place below the canopy where many small plants grow.
- The Forest Floor is the bottom layer where it is very damp and home to many insects.

Did you know? Did you know? Rainforests are often called the 'lungs of the Earth' because the trees help to keep our air clean and healthy for everyone to breathe!
