

Max's Map of Coordinates

Follow Max the Monkey to find your way across the grid!

- The x-axis is the horizontal line that goes across the bottom of the grid.
- The y-axis is the vertical line that goes up the side of the grid.
- Always move along the x-axis first, then move up the y-axis second.
- The origin is the point (0,0) where both axes meet in the corner.
- We write coordinates as two numbers in a bracket, like (3, 5).

Did you know? Did you know? Coordinates are used by explorers and pilots to find exact locations on a map so they never get lost on an adventure!

Key vocabulary: x-axis · y-axis · coordinate · origin · grid · along
