

Max's Musical Pitch Adventure

Listen closely! Can you hear the high notes and the low notes?

- Pitch tells us if a sound is high like a bird chirping or low like a lion's deep roar.
- Sounds are made by vibrations. Fast vibrations create a high pitch.
- Slow vibrations create a low pitch.
- Max the Monkey uses pitch to help him solve his musical maths puzzles.
- You can change the pitch of an instrument by making the vibrating part shorter or longer.

Did you know? Did you know? When you play a guitar, the thin strings vibrate very quickly to make a high pitch, but the thick strings vibrate slowly to make a low pitch!
