

A Bright Night with Nova

Wrap up warm and join Nova the owl for a sparkling celebration!

- Bonfire Night happens every year on the 5th of November.
- We build big bonfires to keep warm and enjoy the autumn evening.
- Sparklers should always be held at arm's length by an adult.
- Bright fireworks make loud 'bang', 'whizz', and 'pop' sounds in the sky.
- Wearing warm coats, hats, and gloves helps us stay cosy while we watch the display.

Did you know? Did you know? Fireworks were first invented a very long time ago in China, and they use special colours made from minerals to create bright reds, greens, and blues in the sky!
