

Exploring Our World: Human and Physical Geography

Join Finn the Dolphin on a global adventure to discover what makes our planet so special!

- **Physical geography** includes natural features like mountains, rivers, and coastlines that exist without human help.
- **Human geography** focuses on how people live, including where they build towns, cities, and transport systems.
- **Land use** is a key part of human geography; it explains why we have areas for farming, housing, and industry.
- **Climate and weather patterns** are physical features that influence how and where humans choose to build settlements.
- **Infrastructure**, such as bridges, highways, and power stations, is a vital component of human geography that connects communities.
- **The UK's diverse physical landscape** is home to unique ecosystems like peat bogs, woodlands, and cliff-side habitats.

Did you know? Did you know? The UK's physical landscape includes the dramatic mountains of the Scottish Highlands, which were shaped by glaciers thousands of years ago, while our human geography includes iconic transport networks like the London Underground!

Key vocabulary: Physical Geography · Human Geography · Topography · Settlement · Infrastructure · Landmarks
