

Finn's Expedition: Discovering South America

Pack your bags and grab your map – Finn the Dolphin is diving into the wonders of South America!

- **South America is a vast continent located mostly in the Southern Hemisphere, bordered by the Pacific and Atlantic Oceans.**
- **The Andes Mountains run along the western edge of the continent and form the longest mountain range above sea level in the world.**
- **The Amazon River, which flows through the heart of the continent, is the second-longest river globally and holds the largest volume of water.**
- **The continent experiences diverse climates, ranging from the tropical heat of the rainforests to the icy glaciers of the far south.**
- **South America is home to twelve independent countries, including Brazil, Argentina, Peru, and Chile, each with unique cultures and traditions.**

Did you know? Did you know? The Amazon Rainforest is so vast that it produces about 20% of the world's oxygen! It is often called the 'lungs of the planet' because of the incredible number of trees that filter the air we breathe.
