

Max the Monkey's Sharing Party

Learning objective: To solve one-step division problems by sharing objects into equal groups.

Help Max the Monkey share his snacks equally! Look at the groups of items, divide them fairly, and color in the scene to show your work.

Colour this: A large central illustration of Max the Monkey sitting on a tree branch. Below him, on a picnic blanket, there are 12 bananas drawn in two distinct piles of 6. Draw 6 bananas in a circle on the left side and 6 bananas in a circle on the right side. Include simple, bold outlines for the children to color. Max is smiling and holding a clipboard. Add some flowers and grass around the blanket to make the scene bright and inviting.

Steps:

1. Label the two equal groups of bananas in your picture.
2. Label the monkey who is sharing the fruit.
