

Max's Magical Sharing Station

Help Max the monkey share his snacks fairly!

- Division means sharing items into equal groups so everyone has the same amount.
- When we divide by 2, we are splitting a number into two equal halves.
- If you have 6 pennies and share them between 3 friends, each friend gets 2 pennies.
- We can use counters or drawings to help us see how many items go into each group.
- Sometimes, when we share, there might be one item left over that cannot fit into an equal group.
- Max loves to check his work by counting his groups to make sure they are all the same size.

Did you know? Did you know? In math, when we share things into equal groups, it is called division! If Max has 10 bananas and shares them between 2 monkeys, each monkey gets 5. That is a fair share!

Key vocabulary: share · divide · equal · group · leftover · fair
