

Bea the Bee's Garden Discovery

Help Bea the Bee explore the garden! Can you spot all the parts of a plant?

- **Roots** grow deep under the soil to hold the plant steady and drink up water.
- **The stem** stands up tall, like a straw, to carry water from the roots to the leaves.
- **Leaves** are like little green solar panels that catch the bright sunlight.
- **Petals** are the colorful parts of a flower that help attract bees like Bea!
- **Plants** need water, light, and healthy soil to stay happy and healthy.

Did you know? Did you know? Plants are just like us! They get thirsty and need a drink of water to help them grow big and strong, and they need sunlight to make their own yummy food.
