

Nova's Magical Seasons: A Journey Through the Year

Look up at the sky with Nova the Owl and discover how the world changes all year round!

- In Spring, the weather starts to get warmer and we see new buds and flowers growing in the garden.
- In Summer, the sun shines brightly and the days are at their longest, making it perfect for playing outside.
- In Fall, the air turns chilly and the leaves on the trees change color to gold, orange, and red.
- In Winter, the days are short and cold; sometimes we even see frost on the grass or fluffy white snow.
- A 'season' is a special time of year that has its own type of weather and changes in nature.
- The seasons always follow the same circle: Spring, Summer, Fall, and Winter, over and over again.

Did you know? Did you know? Trees like the oak tree grow new green leaves in the spring, but in the fall, they turn orange and brown before falling to the ground to keep the tree's roots warm during the cold winter!
