Zara’s Magical Colour Mixing Lab

Grab your brushes and let’s make the world bright with Zara the Zebra!

- **Red and yellow are primary colours; when we mix them together, they turn into orange.**
- **Blue and yellow are primary colours; when we mix them together, they turn into green.**
- **Red and blue are primary colours; when we mix them together, they turn into purple.**
- **Primary colours are the special 'starting' colours that cannot be made by mixing others.**
- **Secondary colours are the new colours we get when we swirl two primary colours together.**
- **You can always change the shade of a colour by adding a little bit of white paint.**

Did you know? Did you know? If you mix all three primary colours together in the right way, you can create a deep, earthy brown, just like the colour of the soil in a garden!
