Asia: The World's Largest Continent

Join Finn the Dolphin on an expedition across the vast landscapes of Asia!

- **Asia is the largest continent on Earth, stretching from the frozen Arctic Circle in the north to the tropical islands near the Equator in the south.**
- **The Himalayan mountain range is found in Asia and contains Mount Everest, which is the highest point above sea level on our planet.**
- **Asia experiences diverse climates, ranging from the freezing Siberian tundra to the hot, dry Arabian Desert and the humid, rainy monsoon regions.**
- **The continent is home to many large archipelagos, including Japan, the Philippines, and Indonesia, which consist of thousands of individual islands.**
- **Major rivers like the Yangtze and the Ganges are vital to the people of Asia, providing water for farming, transport, and energy through hydroelectric power.**

> *Did you know? Did you know? Asia is so massive that it covers about 30% of the Earth's total land area and is home to over half of the world's human population!*

Key vocabulary: Continent · Himalayas · Tundra · Monsoon · Archipelago · Population density
