Finn’s Amazing World: Physical and Human Geography

Explore our world with Finn the Dolphin! Can you spot the difference between nature and building?

- **Physical geography includes things that are natural, such as rivers, mountains, and forests.**
- **Human geography includes things made by people, such as houses, schools, and shops.**
- **A landmark can be physical, like a giant cliff, or human, like a famous tall tower.**
- **We study both types of geography to understand how our planet works and how we live on it.**
- **Finn the dolphin loves to see physical waterfalls and human-made harbours on his travels!**

Did you know? Did you know? Physical geography is all about things that grow or happen naturally on Earth, like mountains, rivers, and volcanoes. Human geography is about how people change the land, like building bridges, towns, and roads!

Key vocabulary: Physical geography · Human geography · Landmark · Environment · Natural · Man-made
