

# Sustainability Flashcards with Finn the Dolphin

*Learning objective: To understand simple ideas about sustainability and looking after our planet.*

Read the front of the card. Think about the answer. Flip it over (look at the 'Answer' part) to check if you are right. Use the word bank to help you.

|                                                                                                               |                                                                                           |
|---------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------|
| <b>What is Sustainability?</b>                                                                                | <b>What does it mean to Recycle?</b>                                                      |
| Sustainability means using things carefully so we do not run out and the planet stays healthy for the future. | To recycle means to change old items into new things instead of throwing them in the bin. |
| <b>What is Renewable energy?</b>                                                                              | <b>What does Reduce mean?</b>                                                             |
| Energy that comes from sources that do not run out, like the sun or the wind.                                 | To reduce means to use less of something, like using less plastic or less water.          |
| <b>What is the Environment?</b>                                                                               | <b>What is Waste?</b>                                                                     |
| The environment is everything around us, like the air, the land, the water, and the animals.                  | Waste is anything we throw away because we do not need it anymore.                        |
| <b>Why should we Protect the Earth?</b>                                                                       | <b>Give an example of a renewable power source.</b>                                       |
| We protect the Earth so that plants, animals, and people have a safe and happy home.                          | The Sun (solar power) or the wind (wind turbines).                                        |
| <b>How can we save water at home?</b>                                                                         | <b>True or False: Sustainability helps the future.</b>                                    |
| By turning off the tap while brushing our teeth.                                                              | True. It keeps the world healthy for a long time.                                         |
