Nova’s Amazing Material Hunt

Look closely at the world around you—what is it made of?

- **Wood comes from trees and is often used to make chairs and tables.**
- **Glass is a hard material that you can see through, which is why we use it for windows.**
- **Metal is strong and shiny, making it perfect for things like spoons, keys, and coins.**
- **Plastic can be shaped into many things, like lunchboxes and water bottles.**
- **Rock is a very hard, natural material found on the ground that we use to build walls.**
- **Fabric is a soft material that we use to make our clothes and blankets.**

Did you know? Did you know? Some materials like plastic can be melted down and turned into brand-new things, like toys or bottles! This is called recycling, and it helps keep our planet tidy.
