Bea’s Brilliant Plant Guide

Join Bea the Honeybee on a garden adventure to discover the wonderful world of plants!

- **The roots grow under the soil to help the plant stay upright and drink water.**
- **The stem carries water and nutrients from the roots up to the rest of the plant.**
- **Leaves are usually green and they soak up sunlight to help the plant grow big and strong.**
- **Flowers grow petals to attract bees and butterflies, like our friend Bea!**
- **Deciduous trees, like the oak, drop their leaves when the weather gets cold.**
- **Evergreen trees, like the holly, stay green even in the middle of winter.**

Did you know? Did you know? Some trees are called 'evergreen' because they keep their green leaves all year round, while 'deciduous' trees lose their leaves every single autumn!

Key vocabulary: Roots · Stem · Leaves · Petals · Deciduous · Evergreen · Nutrients
