

Kit's Guide to Staying Safe Online

Be a Digital Detective! Keep your data safe and secure.

- Always keep your password a secret. Only share it with your trusted adults at home.
- A strong password uses a mix of letters, numbers, and symbols to stop others from guessing it.
- Never click on pop-ups or links from people you do not know in the real world.
- If you see something online that makes you feel worried, tell a teacher or parent straight away.
- Think before you post! Once something is online, it is very hard to take it back.

Did you know? Did you know? Cybersecurity is like a digital shield! It helps keep all your private information, like your name and address, away from people you don't know.
