

Kit's Cyber-Security Shield: Protect Your Digital World

Be a Digital Defender: Keep Your Data Locked Tight!

- Why is it important to never share your password with anyone, even your best friend?
- How can you identify a 'phishing' attempt in an email or message?
- What is two-factor authentication, and why does it provide an extra layer of security for your accounts?
- Why should you be cautious about the information you post on public forums or social platforms?
- What steps should you take if you accidentally click on a suspicious link?

Did you know? Did you know that a 'strong' password isn't just about length? Using a sequence of three random, unrelated words—like 'Blue-Toaster-Cloud'—is often much harder for a computer program to guess than a short password with symbols, because it is more unpredictable for hackers!
