

Kit's Cyber-Smart Code: Navigating the Digital World

Be a Digital Detective: Think Before You Click!

- Personal information such as your home address, school name, or passwords should always be kept private to protect your identity from strangers.
- If you see something online that makes you feel uncomfortable, worried, or sad, you must tell a trusted adult immediately.
- Not everything you read online is true; always cross-reference information with reliable sources to ensure it is accurate.
- Netiquette is the code of polite behaviour online; treat others with the same kindness and respect you would show in a face-to-face conversation.
- Phishing is a deceptive technique used by scammers to trick people into revealing sensitive information; never click on suspicious links in emails or pop-ups.

Did you know? Did you know? Every time you visit a website, play an online game, or share a photo, you are adding to your 'Digital Footprint'. Much like a physical footprint in the sand, this trail of data can be seen by others and stays online for a long time, which is why Kit the Fox always advises us to think carefully before we post!

Key vocabulary: Cyberbullying · Encryption · Phishing · Digital Footprint · Privacy Settings · Netiquette
