

Finn's Guide to a Sustainable Future

Be a Planet Protector: Choose Today for a Greener Tomorrow!

- **Sustainability involves balancing our current needs with the requirements of the future to ensure we do not exhaust the Earth's finite resources.**
- **Renewable energy sources, such as wind and solar power, are essential because they do not run out, unlike fossil fuels which are limited.**
- **Reducing our carbon footprint means making conscious decisions, such as walking to school or buying locally sourced produce, to lower greenhouse gas emissions.**
- **Conserving water and energy at home helps protect natural habitats and the biodiversity that relies on clean, stable environments.**
- **A circular economy encourages us to repair items rather than replace them, keeping materials in use for as long as possible.**

Did you know? Did you know? Finn the dolphin has noticed that every piece of plastic ever made still exists in some form today! Sustainability means meeting our own needs without compromising the ability of future generations to meet theirs. By reducing, reusing, and recycling, we ensure that the wonders of our blue planet remain vibrant for years to come.

Key vocabulary: Sustainability · Renewable energy · Carbon footprint · Conservation · Finite resources · Biodiversity
