

Max the Monkey's Subtraction Station

Subtract like a pro with Max! Find the difference and solve the puzzle!

- Subtraction is when we take a smaller amount away from a larger amount to find what is left over.
- You can use the minus sign (-) to show you are subtracting two numbers.
- To find the difference between two numbers, you can count on from the smaller number to the larger number.
- When you subtract 0 from any number, the number stays exactly the same!
- If you have £10 and spend £4 on a book, you have £6 left ($£10 - £4 = £6$).

Did you know? Did you know? Subtraction is the opposite of addition! If you have 10 bananas and give away 3, you can count back to find out how many you have left. Max the Monkey loves using number lines to jump backwards to find the answer!
