

Nova's Guide to Living Things

Join Nova the Owl on an adventure to discover what makes a creature a living thing!

- Living things need nutrition to stay alive. This comes from the food they eat.
- Animals that only eat plants are called herbivores, while those that eat other animals are called carnivores.
- Omnivores are clever creatures that eat both plants and meat to get a balanced diet.
- All living things need water to survive and keep their bodies working properly.
- A habitat provides a home for living things, giving them shelter and access to the food they need.

Did you know? Did you know? Unlike plants, which make their own food using sunlight, animals have to hunt or gather their food to get the energy they need to grow, move, and stay healthy!

Key vocabulary: nutrition · organism · herbivore · carnivore · omnivore · habitat
