

Zara's Wonderful World of Patterns

Look closely, spot the pattern, and let your creativity grow!

- A pattern is when shapes or colors repeat in a special order.
- You can make a pattern using two different colors, like red and blue.
- Look for patterns on Zara the Zebra; she has black and white stripes that go over and over again.
- Patterns can be found in our classroom, like the squares on a tiled floor or the dots on a dice.
- When you draw a pattern, try to keep the same order to make it look tidy and clever.

Did you know? Did you know? Patterns are everywhere! From the stripes on a zebra to the spots on a ladybird, nature uses patterns to help animals stay safe and look beautiful.
