

Exploring South America with Finn the Dolphin

Dive into the wonders of South America: A Continent of Contrast and Color!

- The Andes is the longest continental mountain range in the world, stretching through seven South American countries.
- The Amazon Rainforest produces a huge amount of the Earth's oxygen and is home to millions of unique plant and animal species.
- South America is located mostly in the Southern Hemisphere, though some countries lie in the Northern Hemisphere, separated by the Equator.
- The continent features diverse climates, ranging from the dry Atacama Desert to the frozen, icy landscapes of the southern tip.
- There are twelve independent countries in South America, with the largest being Brazil, which covers nearly half of the continent.

Did you know? Did you know? The Amazon River is so vast that it carries about 20% of all the fresh water that enters the world's oceans every single day! Finn the Dolphin loves exploring its winding, murky depths.
