

Max's Monkey Market Math

Learning objective: To solve division problems by sharing objects equally into groups.

Help Max the monkey share his fruit equally! Read the math problems below and color the fruit to show the division. Use different colors for each group to make it clear.

Colour this: A large, friendly monkey named Max stands in the center holding a basket. Around him are two large woven baskets on the left and three smaller baskets on the right. In the foreground, there are 12 bananas and 10 apples drawn as simple, bold outlines for the children to color. Include some patterns on the baskets and leaves on the trees in the background for extra coloring detail.

Steps:

1. Max has 12 bananas. He wants to share them equally between 3 baskets. Draw the bananas in the baskets and label each group '4 bananas'.
2. Max has 10 apples. He shares them equally between 2 hungry friends. Label the two groups of apples.
