

Max the Monkey's Division Adventure

Learning objective: To solve division problems by sharing amounts into equal groups.

Max the Monkey needs your help to share his snacks and toys. Read each problem carefully. Use the space provided to draw dots or circles to share the items into equal groups. Then, write your final answer in the box.

Word bank: share · divide · equal · groups · remainder · total

1. Max has 12 bananas. He wants to share them equally between 3 monkeys. Draw the bananas in the circles below to help Max share them. How many bananas does each monkey get? (2 marks)

2. Max has 20p. He wants to give an equal amount to 4 friends. How much money will each friend receive? Show your working out here. (2 marks)

3. Max has 15 nuts to put into 5 small bags. He wants the same number of nuts in every bag. How many nuts go in each bag? (2 marks)

4. Max has 24 stickers to share between 2 pages in his book. How many stickers will go on each page? (2 marks)

Extension challenge: Can you write your own division story for Max? Start with 16 items and share them into 4 groups.
