

Bea's Brilliant Guide to Plants

Explore the green world with Bea the Bee!

- The roots act like a straw to soak up water and nutrients from the soil to help the plant grow strong.
- The stem acts like a elevator to carry water and food up to the leaves and flowers.
- Leaves are like tiny solar panels that catch sunlight to make food for the plant.
- The flower helps the plant make seeds so that new plants can grow in the future.
- Most plants need sunlight, water, and air to stay healthy and happy.

Did you know? Did you know? Some plants can 'talk' to each other by sending chemical signals through their roots to warn their neighbors about hungry insects!
