

Nova's Magical Year: The Four Seasons

Join Nova the owl to explore how our world changes through the year!

- **Spring is when the weather gets warmer and new flowers begin to grow in the garden.**
- **Summer is the hottest season, with long, sunny days perfect for playing outside.**
- **Fall is when the air turns cool and the leaves on the trees change color and fall to the ground.**
- **Winter is the coldest season, where we sometimes see frost, ice, or even snow.**
- **The weather changes throughout the year as the Earth moves through the four seasons.**
- **Nova the owl notices that the days are longer in summer and shorter in winter.**

Did you know? Did you know? In the summer, we have more hours of daylight, which is why it stays light until quite late in the evening. In the winter, the sun sets much earlier, making our evenings darker and cosier!
