

Springtime with Nova the Owl

Spring has sprung! Join Nova the Owl to discover the wonders of the season.

- As the weather gets warmer in spring, many plants begin to grow new leaves and colorful blossom flowers.
- Animals that spent the winter sleeping, like hedgehogs, wake up from hibernation to look for food.
- Birds begin to build their nests in trees and hedges to get ready for their new chicks.
- The temperature starts to rise, which means we can wear lighter clothes and spend more time playing outside.
- Many baby animals, such as lambs and ducklings, are born during the spring months.

Did you know? Did you know? In spring, the days get longer and the sun stays out for more hours, which helps plants grow faster!
