

## Nova's Water Cycle Flashcards

*Learning objective: To identify and describe the main stages of the water cycle.*

Read the front of the card. Try to guess the answer. Then, look at the back to check if you are right. Use the word bank to help you.

|                                                           |                                                            |
|-----------------------------------------------------------|------------------------------------------------------------|
| What heats up the water in the sea?                       | What is it called when water turns into gas?               |
| The Sun                                                   | Evaporation                                                |
| What is the gas form of water called?                     | What forms when water vapour cools down in the sky?        |
| Water vapour                                              | Clouds                                                     |
| What is it called when water vapour cools to form clouds? | What is it called when water falls as rain, snow, or hail? |
| Condensation                                              | Precipitation                                              |
| Where does rainwater gather after falling?                | Does the water cycle ever stop?                            |
| Collection                                                | No, it is a continuous cycle.                              |
| What liquid falls from clouds?                            | Nova loves to watch this cycle. What is it called?         |
| Rain                                                      | The Water Cycle                                            |
