Exploring Our Coastlines with Finn the Dolphin

Dive deep into the wonders of the coast with Finn!

- **The coastline is the place where the land meets the sea.**
- **A beach is usually made of sand or pebbles that have been washed up by the waves.**
- **Cliffs are steep rock faces that are often formed by the sea wearing away the land at the bottom.**
- **A harbour is a sheltered area of water where boats can be kept safe from rough waves.**
- **The tide is the regular rise and fall of the sea level, caused by the gravitational pull of the Moon.**

> *Did you know? Did you know that coastlines are always changing? The constant power of waves crashing against the rocks is called erosion, which slowly shapes the land over hundreds of years!*

Key vocabulary: Erosion · Cliffs · Beach · Coastline · Harbour · Tide · Headland
